

LEARJET

Model 60 Stang Fairings

FAA / PMA Approved. STC 02209AT-D

Tired of repairing or replacing the aluminum Stang Fairings on your Lear?

The original manufacturer's (OEM's) aluminum fairings, which house the thrust reverser mechanism, are in constant need of repair or replacement due to cracking. Various repairs and reinforcements have been attempted, but none have provided a dependable resolution. Aluminum is simply inadequate material for this high vibration environment.

TruAtlantic Mfg has developed prepreg carbon/epoxy Stang Fairings that virtually eliminate the cracking problem. The new fairings are less than half the weight of the original parts and are the basic geometry of the assembly is unchanged. The use of Fibercote E-765 carbon prepreg for these fairings, with its FAA-approved material property database, permitted the rapid development and certification of these fairings. The fairings have recently passed lightning strike testing in compliance with FAR 25.581.

TruAtlantic Mfg is an Authorized Bombardier Vendor and parts are now in production at our Kenersville, NC facility.

	Original Equipment	New Part Number
#1 Engine Outboard	266-0659-505	19350001-01
#2 Engine Outboard	266-0659-506	19350001-02
#1 Engine Inboard	266-0654-505	19350001-03
#2 Engine Inboard	266-0654-504	19350001-04
