

CARAVAN

Aft & Fwd Partition Nets

FAA / PMA Approved (STC SA02423AT-D)

This STC is applicable to the Cessna 208B

These durable nets allow you to see your cargo

This product is intended as a replacement for the partition nets, P/N 9910573-15 and 9910573-16 in the Cessna Model 208B. The nets are designed to replace the partition nets at several locations in the cabin depending on the model. The net makes use of existing quick connectors in the floor and walls, and a more durable mesh fabric. Note that these are partition nets only and not crash barrier nets. They are designed to separate the cargo zones in the aircraft. They also allow light to pass through, greatly improving inspection of cargo during security inspections.

- The forward partition nets P/N 19492002 are intended for installation at station 188.7, 246.8, 282.0 and 307.0
- The aft partition nets are intended for installation at station 332.0
- They may serve as a direct replacement for existing partition nets
- Uses existing Quick Release connectors
