

CARAVAN COMBI™ Conversion

FAA / PMA Approved (STC SA01166AT)

This STC is applicable to the Cessna 208B

Relocate the Barrier

The COMBI™ is a combination freight and passenger Caravan. Summit Aviation Mfg's freight customers have frequently asked about our ability to carry several couriers or security personnel on routine cargo routes. In addition, we occasionally need the ability to provide jump seating for repositioning our own pilots throughout our freight network. A simple solution was to move the protective barrier aft of the pilot seats and install up to two additional seats. Summit Aviation Mfg's STC moves the cargo barrier aft by 30" and maintains the 9G, 3400 lb. barrier loading.

Removing the seats and moving the barrier back to its original location is easily accomplished when additional freight volume is needed. The COMBI™ Conversion includes hardware, complete installation instructions & support, STC documentation and POH supplements.

Barrier move for COMBI™
